Also remember that cultivation of hibiscus should be very shallow as the feeder roots are close to the surface.

Mr. Lewis S. Maxwell, Entomologist for X-Cel Supply Company, has recently handed us a copy of his forthcoming new book on Florida plants. "FLORIDA PLANT SELECTOR."

This book will soon be on sale at news stands and garden supply stores and is recommended to you as a concise reference to most of the tropical plants used for home landscaping in the central and southern parts of the state. You will remember Mr. Maxwell as the author of the book on Florida insects and his Handbook of Southern Gardening.

Among the collaborators and consultants of this book is our own Nomenclature Chairman, Mr. Eric Golby.

Over 100 species of plants are covered giving botanical names, landscape application, cold and salt resistance, pH requirements, propagation and cultural recommendations. We are sure that most of you will treasure this book, especially if you are a new-comer to Florida.
